

## Final project

I. Create a GitHub repository and document your project using Markdown files (other formats, such as Word documents, result in a 10% deduction). Upload your documentation to GitHub. Your documentation must cover:

- \* Stakeholders & Value: Identify the target audience and the specific business benefits.
- \* Pipeline Architecture: Describe the designed data pipeline, the architecture, the costs, and how these support the business goals.
- \* KPIs: Propose at least three KPIs that the project contributes to measuring.
- \* Implementation: Document the execution, including the code used and an interpretation of the results.

II. Please add us to your repository as contributors ([szabild@yahoo.com](mailto:szabild@yahoo.com) and [balint.matyus@gmail.com](mailto:balint.matyus@gmail.com))

III. Create a slideshow to present your work in 10 minutes and upload it to the Moodle
